Client: Jordan, Kristina (5058)  
Patient Name: Navarro-  
991001002199745  
Species: Canine  
Breed:

Gender: Female  
Weight: 0.00 lbs  
Age: 12 Months  
Doctor: Rebecca Morrison, DVM

Pet Vet Animal Hospital  
2404 E Rock Haven Rd  
Harrisonville, MO 64701

Test	Results	Reference Interval	LOW	NORMAL	HIGH
------	---------	--------------------	-----	--------	------

Catalyst Dx (May 21, 2019 11:57 AM)

TT4	1.7 µg/dL	1.0 - 4.0			
-----	-----------	-----------	--	--	--

Diagnostic Interpretation for TT4

< 1.0 µg/dL Low  
1.0 - 2.0 µg/dL Low Normal  
1.0 - 4.0 µg/dL Normal  
> 4.0 µg/dL High  
2.1 - 5.4 µg/dL Therapeutic

Dogs with no clinical signs of hypothyroidism and results within the normal reference range are likely euthyroid. Dogs with low T4 concentrations may be hypothyroid or "euthyroid sick". Occasionally, hypothyroid dogs can have T4 concentrations that are low normal. Dogs with clinical signs of hypothyroidism and low or low normal T4 concentrations may be evaluated further by submission of freeT4 (fT4) and canine TSH. A high T4 concentration in a clinically normal dog is likely a variation of normal; however elevations may occur secondary to thyroid auto antibodies or rarely thyroid neoplasia. For dogs on thyroid supplement, acceptable 4-6 hour post pill total T4 concentrations generally fall within the higher end or slightly above the reference range.
